CHOOSE THE FABRIC THAT YOU WOULD LIKE TO SEE IN YOUR WINDOW

MEASURING THE WINDOW

Using a metal rule measure the inside of the window.

"A" = length

"B" = width      Measure the width of the window in three (3) places.

TOP   MIDDLE   BOTTOM

Use the narrowest measurement for your **finished width**.

**Remember to measure every window separately.**

Especially the windows that look EXACTLY the same..

Identify the right side of the fabric. ALMOST all fabric is marked.

Identify the repeat pattern and the number of inches between repeats.

Calculate the **finished length** and **finished width** of the shade by following these instructions:

DECORATOR FABRIC

Using the **finished length** measurement of the window, **Add** 1/3 to obtain the total length of fabric needed.

**Example:**    If the **finished length** is 60", Divide 60 by 3 which is 20". Now add 20" + 60" = 80" of fabric needed.

**Add 3"** to the **finished width** measurement for the total **width** of the fabric needed.

LINING FABRIC

**Add 2 1/2"** to the **finished width** measurement for the total **width** of the fabric needed.

Nothing is added to the **finished length**.

MEASURE ONE MORE TIME BEFORE YOU CUT

Cut the decorator fabric and the lining fabric to your measurements.

With the right sides of the fabrics facing each other, pin together at the side edges.

    The length of the lining fabric is the same length as the decorator fabric.

    The width of the lining fabric will be 1/4" narrower on each side.

Lets go to the sewing machine.

Measure 1" in from the needle and place a piece of masking tape on the machine from back to front **as shown in photo**.

Now take your two pieces of fabric that you have pinned together to the sewing machine  
Using the masking tape as a guide, seam along this line the complete length of the shade on each side.    Press the seams open to set stitching.

Turn the seamed fabrics inside out and press the seams again.

Serge or zig-zag top of Decorator fabric. Remove any excess threads.

Place the board at the top edge of the lining as illustrated and pencil mark at **arrow**.

Remove the board, fold the fabric at the pencil mark and press.

Measure from the folded edge to the bottom of the **finished length** and add 1/4" to the length.    Turn up and press at the **finished length**.

Rod Pocket

Sew in a 1 & 1/2" rod pocket at the bottom of the shade

Seam one end of the rod pocket closed.

RIGGING THE SHADE

First select which side of the shade you want to mount your pull cord.

**Remember, at this time you are looking at the lining.**

Cut a piece of **Cord** that is three (3) times the **finished length** of the shade.

Use a square knot to tie the **Cord** to the bottom ring that is on opposite side

Of the pull **Cord**.      **See illustration**

Seal the knot with clear nail polish.

Thread the cord **up** through all of the rings until you reach the board.

Thread the **Cord** through the first screw eye from the outside in

And continue threading the **Cord** through all of the screw eyes.

Repeat this step for each **Cord**.

Before attaching the shade to the window, press shade one more time. While the shade is still in this position,

you can braid the **Cords** that come together on the pull end.

Start 2" below the spot where all of the **Cords** come together and braid to the end.

Slip a Decorator Knob onto the end of the braided **Cord**.

Knot the **Cords** together and Seal with clear nail polish.

Slip the Decorator Knob down to cover the knot.

FINALLY ... LETS ATTACH THE SHADE TO THE WINDOW FRAME

The window is usually framed with sheet rock.

That is OK.

Use the three pre-drilled holes in the wrapped the board and

Insert a 2 &1/2 # 10 screw into each hole as shown.

Turn the screw clockwise in the hole until it pokes through the other

This action will hold the screw in place until you are ready

To mount the shade to the window frame.

FINISHED SHADE >> side.

You may need some help.

Hold the shade in place and use an electric screw driver to turn the center screw into the sheet rock about 2".

Do the same with each of the other screws.

Once you have all three (3) screws in place, finish turning the screws until they are tight.

STAND BACK AND ADMIRE YOUR WORK  
IT IS BEAUTIFUL.  
THE NEXT ONE WILL BE EASIER  
JOB WELL DONE

DON'T FORGET MEASURE TWICE AND CUT ONCE

### Tools Needed

Metal tape measure

Carpenters square

Scissors

Iron

Masking Tape

Sewing Machine

Large Surface (4' X 8' is Good)\*

Preferably padded to press

Staple Gun

Tack Hammer

Drill and Bits

Screw eyes

\* 4' x 8' x 3/4" Plywood is a good size and reasonable

Saw Horse for Legs for the board

Muslin and Cotton batting
